

July 28, 2008

To Whom It May Concern:

This is to certify that all Meguiar Washes are phosphate free and readily biodegrades under both aerobic and anaerobic conditions of secondary wastewater treatment systems. Our washes contain surfactants certified to meet European biodegradable regulations EC648/2004. Therefore, under this regulation our wash products contain surfactants that meet the criteria of ultimate aerobic biodegradation as described in Annex 3, allowing these products to be marketed without further limitations relating to biodegradability.

Sincerely,

Gary Silvers
Vice President of Research & Development
